Back-end development: Express

Node JS – Express and React

The following exercise contains the following subjects:

- express
- react

API:

- Look for an API that displays the weather by location.

Order of operations:

1. Create an express app.
2. Make a GET request that receives a specific location, fetches the data from the API and it sends back.
3. Check your route in postman.
4. Connect express with your react app.
5. Send a "get" request to our back-end server from our react app to get the weather of the user's input.
6. Display the weather in our react app.
